

## MYJAR IT OÜ

MYJAR is a fast growing digital finance company. If you are interested in building your career with a dynamic innovative team and strong international investors then this is the right place for you. At MYJAR we work a little differently to other financial service companies. We are committed to providing responsible short term loans to reliable borrowers. We operate from offices in the City of London and run a technology development and customer service centre in the city centre of Tallinn.

MYJAR grew from 25+ in 2012 to 80+ employees during 2013. We operate within an Agile environment and have some of the leading thought leaders in this area working within us. Our Software development is done in "Scrum", which is an agile development framework. We also adopt processes from the Scaled Agile Framework (SAFe by Leffingwell) to manage cross team planning, prioritization, expectation setting and visualizing our strategy. We utilise all current toolsets and technologies ranging from Jira for epics and stories through to Bamboo for Continuous Integration and testing.

## PYTHON DEVELOPER, 2-3 MONTHS PROJECT

### Role Purpose

We are implementing new software for our reporting requirements and we are looking for Python Developer to support us in writing/designing reports with Django and High Charts. The time frame for the role is 2-3 months.
